<sup>\*1</sup> Value is for the supplied standard zoom lens. The value varies depending on the lens.  
<sup>\*2</sup> Measurement, measuring conditions, and method of notation all comply with ISO/IEC 21118:2020 international standards.  
<sup>\*3</sup> Average light-output value of all shipped products measured at center of screen in NORMAL Mode.  
<sup>\*4</sup> Around this time, light output will have decreased by approximately 50 %. IEC62087: 2008 Broadcast contents, NORMAL Mode, Dynamic Contrast [3], under conditions with 30 °C (86 °F), 700 m (2,297 ft) above sea level, and 0.15 mg/m<sup>3</sup> of particulate matter. Estimated time until light output declines to 50 % varies depending on environment.  
<sup>\*5</sup> Only the vertical keystone correction angle can be corrected in the direction in which the projector body moves away from the screen.  
<sup>\*6</sup> When [VERTICAL KEYSTONE] and [HORIZONTAL KEYSTONE] are used simultaneously, correction cannot be made exceeding total of 55°.

- When [GEOMETRY] is used, the focus of the entire screen may be lost as correction increases.
- Make the curved screen a circular arc shape with one part of a perfect circle removed.
- Adjustment range of the [GEOMETRY] items may not match the listed projection range depending on the projection lens.

Use this projector within the projection range, otherwise the correction may not work.  
<sup>\*7</sup> Only compatible with dot clock frequency of 27 MHz (pixel repetition signal).  
<sup>\*8</sup> 4K/60p signals are converted to the projector's resolution (1920 x 1200 pixels) upon projection. Supported terminals: DIGITAL LINK/HDMI®  
<sup>\*9</sup> With legs at shortest position.  
<sup>\*10</sup> Limits the luminance when used in locations from 0 m to 2,700 m (0 ft to 8,858 ft) above sea level at ambient temperatures of 30 °C (86 °F) or higher, or from 2,700 m to 4,200 m (8,858 ft to 13,780 ft) above sea level at ambient temperatures of 25 °C (77 °F) or higher.  
<sup>\*11</sup> Average value. Weight varies for each product.  
<sup>\*12</sup> For details, see the Spec File of each individual lens.  
<sup>\*13</sup> The symbol at the end of the part number will vary depending on the type of license.

- The value for L (distance to screen) varies slightly within ±5% depending on the zoom lens characteristics.
- The zoom lens characteristics may cause slight image distortion.
- When using keystone correction is used, the image is corrected in the direction that reduces its projected size.
- The brightness varies depending on the zoom setting.

Note: When the ET-DLE055 is mounted, the optical lens shift function cannot be used.

**Caution:**

- All construction work should be done by a qualified technician.
- When mounting to the ceiling, use the special mounting bracket. Furthermore, in order to prevent it from falling down from the ceiling, use the supplied wire on the mounting bracket.

- \* The value for L1 may contain an error of within ±5%.
- \* When using keystone correction, the images will be corrected so that they will tend to be smaller than the specified screen size.
- \* This measurement is not the distance between the rear of the projector and the wall, but is instead the distance between the rear of the projector and the screen surface. Leave at least 500 mm of space between the rear of the projector and the wall and any other objects in order to provide adequate ventilation space. If setting up the projector in a closed room, be sure to provide separate air conditioning and ventilation equipment. If there is insufficient ventilation in the room, radiated heat may build up and cause the protection circuit of the projector to operate.

**Formula for calculating possible heights when using the ET-DLE035**

If using a screen size which has not been previously mentioned, use the following calculation formulas to obtain the possible setting-up height.

For screen aspect ratio of 16:10 Possible setting-up height A1 (mm) = Projection screen size (inches) x 5.0-72.1  
Possible setting-up height A2 (mm) = A1 + 200

For screen aspect ratio of 16:9 Possible setting-up height A1 (mm) = Projection screen size (inches) x 5.9-72.1  
Possible setting-up height A2 (mm) = A1 + 200

For screen aspect ratio of 4:3 Possible setting-up height A1 (mm) = Projection screen size (inches) x 5.7-72.1  
Possible setting-up height A2 (mm) = A1 + 200

\* There may be a small margin of error in the values obtained from the above formulas.

**Shift range**

Optical axis shift function allows to shift the position of a projected image as shown below.

\*1 Pixel-Repetition signal (dot clock frequency 27.0 MHz) only  
 \*2 The signal with 1/1.001x vertical scanning frequency is also supported.  
 \*3 YPBPR 4:2:0 format only  
 \*4 VESA CVT-RB (Reduced Blanking)-compliant  
 \*5 Samples the pixels in the image processing circuit and projects the image.

NOTE:  
 • A signal with a different resolution is converted to the number of display dots. The number of display dots is 1920 x 1200.  
 • The “i” at the end of the resolution indicates an interlaced signal.  
 • When interlaced signals are connected, flickering may occur on the projected image.

**List of plug and play compatible signals**

Signal with ✓ in the plug and play compatible signal column is the signal described in the EDID (extended display identification data) of the projector. For the signal without ✓ in the plug and play compatible signal column, the resolution may not be selected on the computer even if the projector is supporting it.

\*1 Pixel-Repetition signal (dot clock frequency 27.0 MHz) only  
 \*2 The signal with 1/1.001x vertical scanning frequency is also supported.  
 \*3 YPBPR 4:2:0 format only  
 \*4 VESA CVT-RB (Reduced Blanking)-compliant  
 \*5 Samples the pixels in the image processing circuit and projects the image.

NOTE:  
 • A signal with a different resolution is converted to the number of display dots. The number of display dots is 1920 x 1200.  
 • The “i” at the end of the resolution indicates an interlaced signal.  
 • When interlaced signals are connected, flickering may occur on the projected image.

**List of SDI compatible signals**

**Notes on projector placement and operation**

- Prevent hot and cool air from the air conditioning system to blow directly to the ventilation ports (intake and exhaust) of the projector.
- Do not stack projectors on top of each other.
- Do not block the ventilation ports (intake and exhaust) of the projector.

- Do not install the projector in a confined space. When installing the projector in a confined space, provide air conditioning or ventilation separately. Exhaust heat may accumulate when the ventilation is not enough, triggering the protection circuit of the projector.
